

Aquatech Process Technology Selected For 1PointFive's Inaugural Direct Air Capture (DAC) Facility, Stratos

- Aquatech's evaporation process technology will support 1PointFive's carbon capture, utilization, and sequestration (CCUS) goals at its Stratos plant, underscoring Aquatech's commitment to the green energy transition and circular economy.
- Known for its efficiency, reliability, and sustainability, Aquatech's evaporation process technology aims to maximize the capturing capacity of the carbon sorbent solution while minimizing energy consumption.
- Aquatech's Applied Testing & Development Center in Wisconsin played a significant role in benchmarking and optimizing process performance for efficient carbon capture.
- Stratos is expected to become the world's largest plant of its kind, capable of capturing up to 500,000 metric tons of CO₂ manually when fully operational.
